

# VACUUM vs TRADITIONAL

## Gutter Cleaning Methods

### Traditional

- Involves using a ladder to access the gutters
- Requires a trowel and bucket to remove the debris
- Commercial properties may require scaffolding or a raised lifting platform
- High risk activity (falling from height)
- Can cause a mess from falling debris
- Time consuming
- Restricted access may leave some gutters unreachable

### Vacuum

- Involves standing on the ground to access the gutters
- Requires a vacuum system with remote camera
- Commercial properties may not require additional access equipment
- Low risk activity
- Will not cause a mess as the debris is vacuumed up
- Quicker than traditional methods
- Restricted access will not cause gutters to be unreachable
